

Media Box S

Value-based audio device for flash media and USB sticks

The Media Box S is a digital audio source designed for users who want to listen to their digital music on their audio system in without the need for a computer or NAS drive. The Media box accepts a USB thumb drive, hard drive or SD card containing MP3, WMA, AAC (no DRM support) or VBR files (up to 384 kbps compression). An internal 24-bit/96kHz low-jitter up-sampling D/A converter chipset enhances the fidelity of your digital music files when played back through the Media Box S. The files are then selected via the three button front panel controls or by the supplied IR remote control. Navigation of your music catalog; artists, albums, track and playlists can be monitored on the high contrast LCD front panel display and random or shuffle play is available. Gold-plated stereo analog RCA and a SPDIF digital outputs easily interface the Media Box S to your amplifier or DAC. An onboard power supply powering both the unit and USB drives, is included. Silver or Black finish.
