# WaveWood

Absorption ⊕ Diffusion ⊕ Bass Trap

Vicoustic's flagship WaveWood panel has been specifically developed to treat acoustic problems without destroying a room's ambience, or over-deadening the sound. WaveWood is made from a combination of acoustic foam and wood. Its instantly recognizable design results from unique research based on the acoustic properties of the wood

and foam, combined with non-linear sequential cavities that enable WaveWood to act as both an absorber and diffuser. It is particularly effective in treating medium and high frequencies as well as solving issues such as flutter echoes. When placed in the corners of a room, it will act as a bass trap, controlling low frequencies very efficiently.

### Available Wood Colors

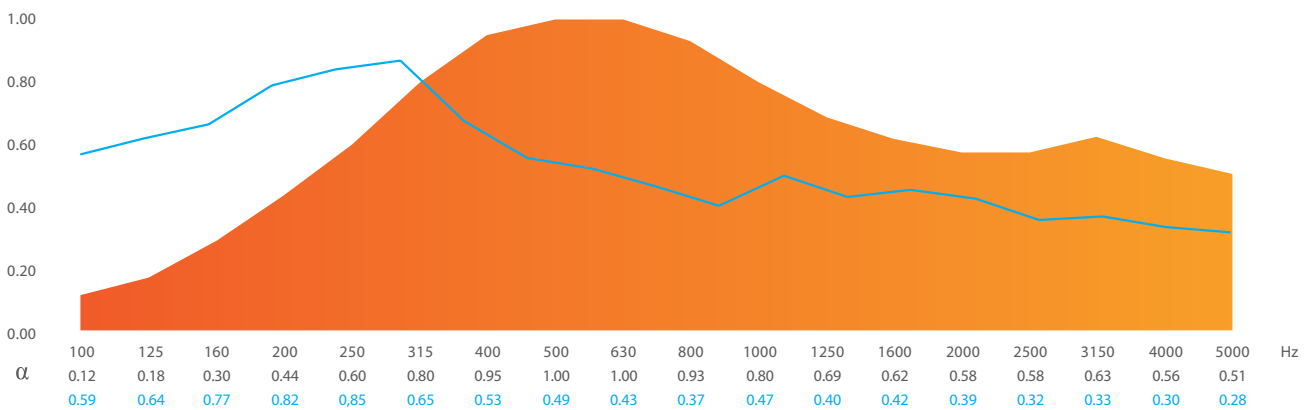

#### Bass Trap Performance

WaveWood can also be highly effective in controlling low frequencies when applied on the corners and used as bass trap.

#### Absorption Performance

WaveWood act both as an absorber and diffuser and is particularly effective in treating medium and high frequencies

#### Dimensions

WaveWood Pro 60.4 595 x 595 x 44 mm  
 WaveWood Pro 120.4 1195 x 595 x 44 mm  
 WaveWood 60.4 595 x 595 x 60 mm  
 WaveWood 120.4 1195 x 595 x 60 mm

#### Installation

Flexi Glue  
 T-Bar

#### Packaging Info.

WaveWood Pro 60.4 6 unit box  
 WaveWood Pro 120.4 6 unit box  
 WaveWood 60.6 10 unit box  
 WaveWood 120.6 4 Unit box
